The 2004/2005 Highway Inventory Summaries

Updated summaries for 2004/2005 are not available due to a project undertaken by Highway Planning and Design Branch auditing the Highway Inventory System (HIS) and the Linear Referencing System (LRS) to improve the quality of the data and GIS based information. The synchronization of the highway inventory data contained in the HIS and the spatial alignments that make up the LRS will result in a unified base for departmental use and analysis. The audit is based on the 2003 Highway Inventory and 2001 LRS, this project will set a bench mark for yearly publications of the HIS and LRS respectively.

2004/2005 Highway Inventory will be completed after the audit, in the fall of 2005. The summaries for next year, 2005/2006, will include two sections 2004/2005 updates and 2005/2006.

The following summaries are based on the 2003 Highway Inventory current as of December 31, 2003. The 2003 Highway Inventory distances are derived from the GIS (geographic information system) based linear referencing system (LRS) and regional construction reports. Section and route distances are to 3 decimals (1 metre) and are defined below.

Section Distance - Sum of all section lengths of a specific highway number in each region. For divided highways this includes both directions.
Undivided, ahead and back directions

Route Distance - Sum all route lengths for a specific highway number in each region. For divided highways the route length (nominal highway distance) is based on the primary control line.
Ahead and undivided directions only

All section distances are identified in the shaded areas and route distances are in white areas. Route distances are not applicable for summaries based on surface type because divided sections of roads do not necessarily have the same surface.

2003/2004 Summaries from the Highway Inventory
